Long ago, an event transpired whose details have become obscured by the passage of time, leaving no surviving records to elucidate its nature.

Nevertheless, the significance of this occurrence remains evident, as it has led to the enduring prohibition against CIS Humans accessing even the most basic tiers of the Multiverse.

The implications of this restriction suggest a profound impact on the socio-political landscape, shaping the interactions and limitations imposed on these beings in their quest for

knowledge and exploration.

Years ago, my beloved late Uncle Albert, who devoted his life to the pursuit of legal access to the Multiverse, introduced me to an acquaintance of his.

This individual, who took great pride in recounting his extensive career as a smuggler and a merchant adept at traversing the harmonic barriers, specialized in the creation of the necessary documentation required for passage through the Multiverse's Immigration Bureau, which is situated

at each Stargate Point of Entry.

The individual in question is the first to articulate that all CIS Humans have been prohibited from participating in the Multiverse, even in regulated capacities such as domestic workers, seasonal migrants, or for any access beyond highly restricted day passes and a limited number of organized tours.

This assertion serves to highlight his distinctive services and expertise in effectively navigating the complexities of immigration regulations, thereby enabling CIS Humans to secure

employment in roles that employers across various Multiverse Industries assert local residents have chosen to avoid.

Having dedicated his life to establishing a legitimate pathway for immigration, he unequivocally advised against employing the services of a smuggler due to the significant risks involved.

During his visit to a particular stargate entry point, where he was honored and sponsored with a restricted one-day border pass, he encountered a prominent immigration notice.

This sign clearly indicated that any individual apprehended as an illegal immigrant would face a lifetime ban from re-entry during their current incarnation, underscoring the severe consequences of such actions.

I inquired of both individuals the rationale behind the willingness of some to pay an exorbitant amount of Gold Dinars to a smuggler, particularly in light of the significant risks associated with being apprehended.

If the consequences of capture are indeed so severe, it raises the question

of what drives individuals to such desperate measures, compelling them to engage in transactions that could lead to dire repercussions.

The friend of my uncle offered a smile before casually shrugging his shoulders, subsequently remarking, "What motivates CIS Humans to engage in any activity?"

In my youth, I found myself grappling with the complexities of that question, and even after many years, my experiences have shaped my understanding significantly.

My engagement with the Mystery School of Alexandria through the Home Study Course, coupled with my subsequent internships under the esteemed guru Wanda—who herself escaped from the renowned Eight Sphere of the Multiverse following a malfunction of her portable harmonic frequency modulator during one of her numerous humanitarian missions to what is often referred to as the Prison Planet—has provided me with profound insights.

This journey has illuminated the

motivations that compel individuals to risk everything in pursuit of a semblance of existence within the boundless expanse of the true universe.

Albert dedicated both his life and professional endeavors to the pursuit of uncovering forgotten manuscripts and enigmatic sages, such as Guru Wanda, who imparted wisdom on an ancient method for accessing the Multiverse.

This intricate pathway necessitated extensive training and a high level of expertise, enabling individuals to master their own harmonic and

magnetic frequencies through rigorous meditation practices and specialized exercises.

The implications of this statement are profound, revealing the essential truths that Albert's smuggler associate hinted at during our past conversations.

The very notion of dedicating one's entire existence and resources to perpetual meditation would likely lead the majority of individuals to a state of insanity, particularly when there exists the option to engage a smuggler who can assist in adjusting frequencies to

transcend the harmonic and frequency obstacles that divide us from the boundless expanse of the Multiverse and the reality that many consider to be the authentic world.

It is evident that the members of CIS Humanity exhibit a notable impatience, consistently in pursuit of expedient solutions or simplified methods to attain their objectives.

This characteristic tendency underscores a broader cultural inclination towards seeking immediate gratification, often at the expense of

more sustainable or thoughtful approaches to problem-solving.

The information that our affable smuggler neglected to reveal, which I subsequently learned from the esteemed guru Wands, was that he possessed no clandestine talents or exceptional skills.

Instead, he relied on an early prototype of the portable, consumer-grade harmonic frequency modulator, a device that had been embraced by individuals throughout the Multiverse as a practical and economical means of

traversing its vast dimensions.

This revelation underscores the significance of technological advancements in facilitating interdimensional travel, rather than the reliance on innate abilities or specialized training.

The act of disseminating this information frequently subjects me to online harassment or verbal attacks, wherein I am derided for my perceived ignorance or accused of possessing a remarkable capacity to maintain eye contact while fabricating narratives.

This behavior evokes the cultural ethos reminiscent of individuals raised in the oil-rich landscapes of historical West Texas, where the prevailing sentiment often revolved around the adage, ***"Do not allow the truth to obstruct a compelling tale."***

Such experiences highlight the contentious nature of discourse surrounding controversial topics, revealing a societal tendency to prioritize sensationalism over factual accuracy.

Numerous critics, including alleged

whistleblowers from various intelligence agencies and individuals associated with clandestine governmental operations, assert that the concept of a portable frequency modulator is fundamentally unattainable, dismissing it as mere science fiction.

These critics argue that the Defense Advanced Research Projects Agency (DARPA) has spent nearly six decades attempting to develop such a device, only to produce large-scale industrial facilities that are necessary to

accommodate the immense electrical power required for their experiments. They contend that DARPA's efforts have been misguided, as the agency has mistakenly pursued what they perceived to be a time travel mechanism, failing to recognize the inherent impossibility of time travel itself.

Instead, the focus of their research has been on the transfer of energy across a limited spectrum of sub-frequencies, which are the only frequencies capable of effective transmission.

The concept of miniaturizing these devices to a pocket-sized format was unimaginable to even the most brilliant thinkers among our educated elite.

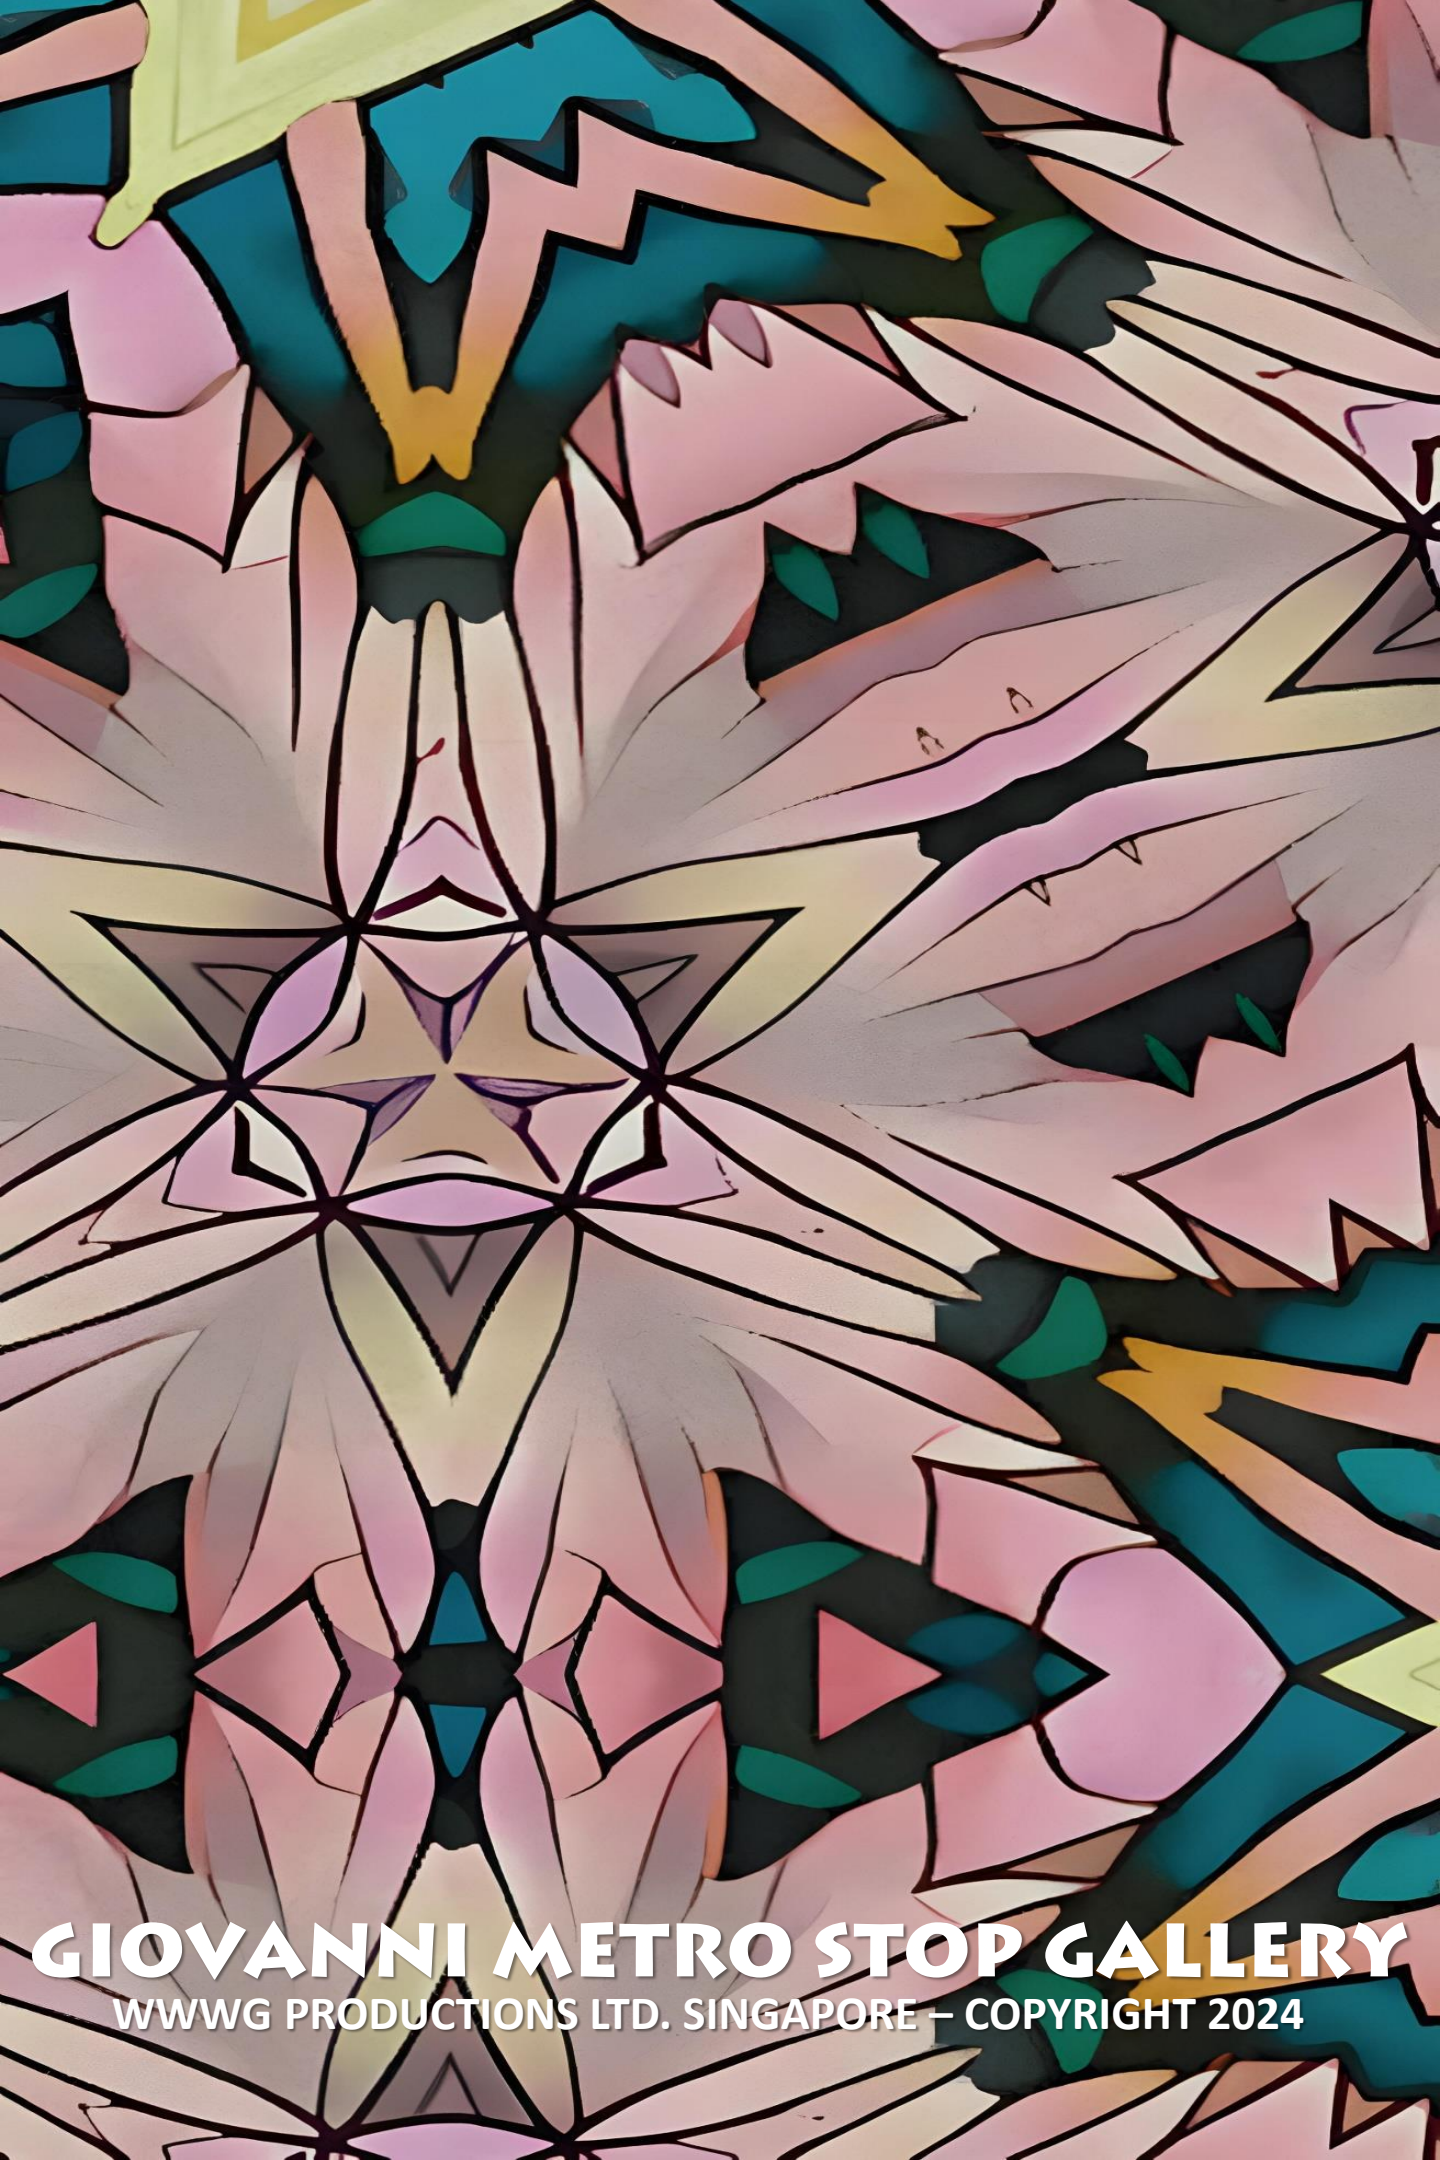

A common inquiry that arises is,
"What would be the source of power for such a device?"

The response to this question is straightforward, and I can disclose that it does not breach my nondisclosure agreement.

These units harness the Earth's magnetic frequency and gravitational

forces to generate the requisite power.

The specifics regarding the methodologies employed to harness or capture this energy force, as well as the proprietary software and hardware utilized in the conversion of these natural forces into a highly concentrated energy source, remain beyond my capacity to discuss.

This limitation arises from the obligations imposed by any non-disclosure agreements I may be bound by, which prevent me from revealing such sensitive information.

Consequently, I am unable to provide insights into the operational processes or the technological frameworks that facilitate this energy transformation.

The underlying rationale for this perspective is the conviction that the intellectual elites managing DARPA and various private sector research initiatives are relying on technological concepts that have been in existence for several centuries.

This reliance on antiquated technology suggests that, without obtaining a functional prototype of contemporary

advancements, these entities may face significant challenges in their endeavors.

Consequently, they risk spending another century attempting to replicate technologies that were abandoned long ago, rather than innovating based on the current state of knowledge and capabilities.

The extensive efforts undertaken by the government to apprehend the esteemed guru Wanda, frequently discussed in my writings on this topic, illustrate the profound obsession that

has characterized their approach.

This situation has escalated to what can be described as a "Code Red" priority, particularly concerning the acquisition of her harmonic frequency modulator, even in its damaged state.

The prevailing belief is that securing this device could enable private industry to reverse-engineer its technology, thereby amplifying the urgency surrounding its retrieval.

The circumstances leading to the expulsion of CIS Humans from the

Multiverse are deeply rooted in a complex interplay of genetic manipulation and socio-political upheaval.

Initially, CIS Humanity was subjected to significant alterations in their DNA, specifically the introduction of what is termed a "time gene."

This modification was intended to curtail their life expectancy, thereby preventing the inadvertent transmission of a longevity gene that had been introduced during earlier genetic experiments aimed at

optimizing their capabilities for labor in a harsh mining colony.

This colony, established in a desolate environment, became the sole refuge for CIS Humans after they were cast out of the Multiverse.

The original workforce, composed of off-world laborers, had revolted against the oppressive working conditions, which included inadequate time off and insufficient benefits, such as dental care.

Consequently, the CIS Humans were left to navigate a precarious existence,

reliant on nearly forgotten arts that hark back to the time of their banishment, as they struggled to survive in a world that had forsaken them.

Numerous scholars and enthusiasts may contend that the narratives surrounding the extraordinary lifespans of early humans, as depicted in biblical texts, are merely mythological constructs or misinterpreted folklore originating from the era preceding the great flood.

However, upon closer examination,

GIOVANNI METRO STOP GALLERY

one must consider whether these accounts provide a substantial framework for understanding the remarkably extended lifespans attributed to these individuals in the scriptures.

The implications of such longevity challenge conventional interpretations of human existence and invite deeper inquiry into the cultural and historical contexts that shaped these narratives. If the subjects in question pique your curiosity, I would suggest making an effort to gain entry to the Mystery
